

Privacy Policy: MoneyFlow AI

Effective Date: May 24, 2026

MoneyFlow AI is committed to protecting your privacy. This Privacy Policy explains how your personal, financial, and technical information is collected, used, and protected when you use our mobile application.

1. Information Collection

MoneyFlow AI collects the following types of information to provide and improve its services:

- ❖ **Personal Information:**

When you create an account, we collect your name and email address. You may also optionally provide a profile bio and profile picture.

- ❖ **Financial Data:**

To enable core functionality, the app collects and stores income, expenses, transaction categories, transaction dates, and monthly budget limits.

- ❖ **Security Data:**

The app allows users to set a security PIN and may use biometric authentication (fingerprint/face recognition). Biometric data is handled entirely by the Android system and is never stored on our servers.

- ❖ **Device Information:**

Basic device-related information may be collected for Firebase authentication and service functionality, such as device identifiers.

2. How Data is used

Your information is used strictly for the following purposes:

- ❖ **Authentication:**

To securely manage user login and account access using Firebase Authentication.

- ❖ **Personal Finance Management:**

To calculate balances, generate financial health scores, and provide spending insights.

- ❖ **Data Visualization:**

To generate charts and analytics using MPAndroidChart for better understanding of financial activity.

- ❖ **Cloud Synchronization:**

To sync user data securely across devices using Firebase services.

3. Data Storage

We use a hybrid storage system to ensure security and performance:

- ❖ **Cloud Storage (Firebase Firestore):**
Stores user profiles, transactions, and budget data securely.
- ❖ **Cloud Storage (Firebase Storage):**
Used for storing profile images.
- ❖ **Local Storage (Room Database):**
Used to store local profile history and offline data caching.
- ❖ **Encrypted Preferences:**
Security settings such as PIN are stored securely using Android's encrypted shared preferences.

4. Data Sharing

MoneyFlow AI does not sell, trade, or rent user data to third parties.

Data is only shared with trusted service providers such as Google Firebase strictly for app functionality. No data is used for advertising or marketing purposes.

5. Security

We implement multiple security measures to protect user data:

- ❖ **Authentication Security:**
Firebase Authentication ensures secure access to user accounts.
- ❖ **Data Isolation:**
Each user's data is linked to a unique user ID (UID), ensuring users can only access their own data.
- ❖ **Local Security:**
Optional PIN lock and biometric authentication help protect unauthorized access.
- ❖ **Encryption:**
All data transmitted between the app and Firebase is encrypted using SSL/TLS security protocols.

6. User Rights & Data Control

Users have full control over their data:

- ❖ **Access & Update:**
Users can view and update their profile and financial data at any time.

❖ **Data Deletion:**

Users can delete their account permanently. This will remove:

- Authentication account
- All transaction data
- Budget records
- Profile information from cloud storage

7. Third-Party Services

The application uses the following third-party services:

- Google Firebase (Authentication, Database, Storage)
- MPAndroidChart (Data visualization)
- Lottie (Animations)
- Glide (Image loading and caching)

8. Contact Us

For any questions, please contact the developer through the official submission or course platform.
